## [PSZT-P] Tabelaryczne zestawienie wyników

Piotr Frątczak Bartosz Świtalski 24 listopada 2020

#### 1 Objaśnienia

k value - liczba K kolejnych iteracji w kryterium K-iteracji sd eps - wartość  $\epsilon$  dla kryterium Odchylenia Standardowego best worst eps - wartość  $\epsilon$  dla kryterium Najlepszy-Najgorszy variance eps - wartość  $\epsilon$  dla kryterium Wariancji Dopasowania

best fit - najlepsze znalezione optimum

best fit mean - średnia najlepszych znalezionych optimów

best fit std. deviation - odchylenie standardowe najlepszych znalezionych optimów

number of evals mean - średnia liczba ewaluacji funkcji celu

#### ${\bf 2} \quad {\bf Kryterium} \ {\it K-iteracji}$

| k value       | best fit | best fit | best fit       | number of evals |
|---------------|----------|----------|----------------|-----------------|
| k varue       | Dest IIt | mean     | std. deviation | mean            |
| 3             | 118.55   | 4933.93  | 3448.81        | 5659.2          |
| 7             | 0.49     | 2.69     | 1.95           | 36291.2         |
| 15            | 0.38     | 0.92     | 0.54           | 44248.8         |
| 25            | 0.18     | 0.54     | 0.35           | 50649.6         |
| 35            | 0.09     | 0.43     | 0.23           | 60707.2         |
| 100           | 0.05     | 0.24     | 0.14           | 79993.6         |
| 200           | 0.04     | 0.25     | 0.15           | 96967.2         |
| budget/lambda | 0.03     | 0.21     | 0.14           | 99980.0         |
